**In the name of Allah,
the Most Gracious,
the Most Merciful**

Introduction:

Cancer is a disease caused by an uncontrolled growth/division of abnormal cells which tend to proliferate uncontrolled and in some cases, to metastasize. It is a name, like AIDS and other names, one doesn't have to be afraid of that. Knowledge of small as well constitutional remedies helps in treatment of cancer cases. Most times these small remedies are followed well by deep acting medicines for example *Lachesis* will follow *Condurango*; *Phosphorus* will follow *Conium*.
